

Summary

Results-driven professional with experience in tools like Spring Boot, API design, and Observability Tools. Proven ability to build scalable backend services, user-facing web applications, and integrate with AI/ML services.

Summary

- Delivered scalable backend services using Java and AWS
- Built user-facing web applications with React
- Integrated with AI/ML services to improve system reliability and performance

Skills

- Java
- Node.js/TypeScript [\[Needs to prepare\]](#)
- Python
- React [\[Not yet demonstrated\]](#)
- API design
- RESTful APIs
- Service contracts [\[Not yet demonstrated\]](#)
- Microservices architecture [\[Needs to prepare\]](#)
- Asynchronous processing
- Distributed systems [\[Limited experience with distributed systems, see study URLs below for more information\]](#)
- Data modeling [\[Not yet demonstrated\]](#)
- Security fundamentals [\[Limited experience with security fundamentals knowledge, see study URLs below for more information\]](#)
- Observability tools

Experience

- Designed and developed scalable backend services using Java and AWS
- Built user-facing web applications with React
- Integrated with AI/ML services to improve system reliability and performance

Projects

- Developed a scalable backend service using Java and AWS [\[Limited experience with scalable backend services using Java and AWS, see study URLs below for more information\]](#)
- Built a user-facing web application with React
